CODY STONE

JULIE HARRIS

BORDEN ANNOUNCES TOP GRADS

Cody Stone, son of Mr. and Mrs. Jerry Stone, has been named valedictorian of Borden High School. Cody has maintained a grade average of 96.71 and a grade point average of 3.98. He is a member of the National Beta Club, the varsity football and basketball team, as well as the marching and contest band. Cody is a member of the FFA and 4-H Clubs. In FFA he earned the Lone Star Farmers degree and advanced to the state contest in dairy cattle judging. In 4-H he was a gold star winner for outstanding service. He was a member of the debate team and the one-act play cast. He advanced to regional in debate and was selected best actor his junior year and to the all star

cast his senior year. He was voted the most likely to succeed and most school spirit his senior year.

Cody will enroll at Texas A&M University in the fall and major in biochemistry.

Julie Harris daughter of Mr. and Mrs. John Harris, was named salutatorian of Borden High School. She has maintained a grade average of 96.14 and a 3.98 grade point average. Julie is a member of the National Beta Club, girls varsity basketball team, FHA, Band and was chosen class president. She was state champion in shorthand her junior year and a state champion in editorial writing and also a state qualifier in

GUEST SPEAKER FOR AWARDS BANQUET

Dr. Bailey M. Marshall was the guest speaker at the annual Awards Banquet held Tuesday night May 8th at 7:30 p.m. in the Borden County High School Cafeteria.

Graduated from high school in Georgetown, Texas, after participating and lettering in football, basketball, track and baseball, and serving as president and in other offices of the the Student Council. Attended Stephen F. Austin College and lettered four years in football and one year in track. Was captain of the football team, selected Most Outstanding Athlete in 1955, received Little All-

American and All-Conference recognition in football, and was selected for Who's Who in American Colleges and Universities, and Alpha Chi, and honorary society (top 10% in class).

Served as assistant coach and taught science at Gladewater in 1956-57 and served as assistant coach and math teacher at White Oak until summer 1964, when he became the principal of White Oak High School. Moved to Lockhart as High School Principal in summer 1966. Came to the University of Texas as assistant athletic director of the Interscholastic League in February 1967, and worked part time in this capacity while working toward a Ph.D. in educational administration. Was named athletic director of the League in September 1968. Competed his PH.D. during the summer 1972. He was appointed Director of the UIL on September 1, 1977.

While coaching football, his teams compiled a record of 62 wins, 14 losses, and 3 ties as assistant and head coach. Teams won or tied for district five of eight years under his coaching, played for one state championship in 1957, and was defeated in the semi-finals in

DR. BAILEY M. MARSHALL

1960. His track team won the State Championship in 1958. Dr. Marshall also officiates basketball at the high school and college level.

He was selected to the Hall of Fame at Stephen F. Austin State University. He has served as Chairman of the National Alliance Baseball Rules Committee, is a member of NCAA Football Rules Committee and National Speech Committee. He has served as officer in local TSTA, PTA, and in church organizations.

Dr. Marshall has four children: Jackie, Steve, Jana, and LeAnn.

He is married to the former Becky Bludau, who currently officiates basketball for high schools and various college conferences including the Southwest Conference.

literary criticism her senior year. Other honors include Who's Who among high school students, Homecoming Queen, Football Sweetheart, All School Favorite, Miss BHS and Most Likely to Succeed. Julie will enroll at Texas Tech University in the fall and major in accounting.

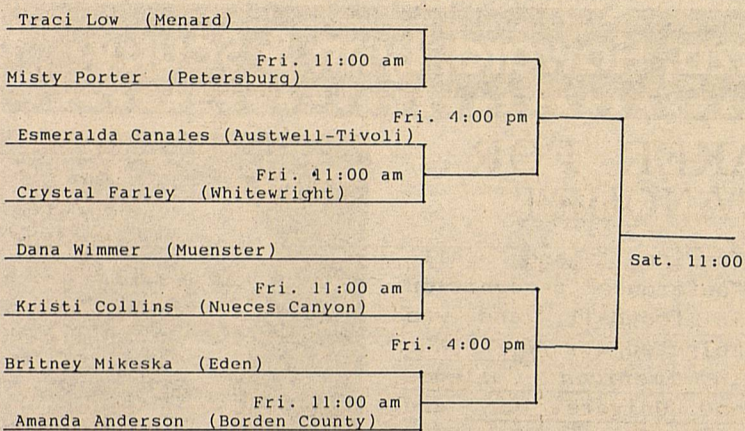

Baccalaureate services will be at 11:00 a.m. on Sunday, May 27 1990 in the school auditorium.

Commencement exercises will be Thursday, May 31, at 8:00 p.m. in the school auditorium.

STATE TOURNAMENT PAIRINGS

This Friday at 11:00 a.m., ABorden County sophomore, Amanda Anderson, will play her state tournament opening match. She will be facing the Region II winner, Britney Mikeska of Eden. Should she win her state quarter-final match, Amanda will then play the semi-

final match that afternoon at 4:00 against the winner of Dana Wimmer of Muester or Kristi Collins of Nueces Canyon. The state finals are set for 11:00 the next morning at Penick-Allison Tennis center on the campus of The University of Texas.

CORRECTION!

In the April 26 issue of the Junior High and Elementary U.I.L. Contest Results, GRANT KEY was left off the original results sheet. He along with

team mates REAGAN SMITH and SARA LUSK scored 100 on the Picture Memory Contest, RENDEE HERRING went to the contest as alternate.

WATER WEEK, MAY 6-12

Texans can do a lot as individuals to help assure an ample water supply in the future.

Consumers simply can't take water for granted, and that reminder is one of the purposes of National Drinking Water Week, May 6-12.

An average household uses about 107,000 gallons of water per year. Each person uses about 80 gallons per day at an average cost of 27 cents. About half this water is consumed during the summer months, when much of it goes to watering the lawn and washing the car.

But we can cut this daily amount considerably, by adopting some simple, inexpensive conservation measurers. These include:

Applications are still being accepted for area basketball players who want to be a part of the South Plains College Texan and Lady Texan summer basketball camps scheduled for June and July.

The camps, hosted by SPC athletic department, are designed for boys in the third grade through high school and girls in the fifth grade through high school, said Joe Tubb, SPC athletic director.

The Texan Basketball Camp for boys is scheduled for June 3-7 and July 29-Aug. 2. Special emphasis will be given to junior varsity and junior high age boys during the July 29 camp, and a camp highlight will be a guest appearance by NBA star Craig Ehlo of the Cleveland Cavaliers. The camp will be directed Ron Mayberry, SPC Texan head coach.

The Lady Texan basketball camp, under the direction of Lyndon Hardin, SPC Lady Texan head coach, will be July 22-27.

Registration for both boys basketball camps is set for 4 p.m. June 3 and July 29 in Texan Dome. The camps will conclude at 7 p.m. June 7 and Aug. 2.

Registration for the girls basketball camp will begin at 2 p.m. July 22 in Gillespie Hall on the SPC campus. Activities will conclude at 3 p.m. July 27.

Cost for the boys camp is \$170 for overnight campers, \$145 for day campers who eat in Texan Hall and \$90 for day campers who do not eat in Texan Hall. A \$50 deposit should be returned with the camp registration.

Cost for the girls camp is \$190 for overnight campers, \$155 for campers who

eat in Texan Hall and \$100 for campers who do not eat in Texan Hall. The deposit for Lady Texan Camp is \$75.

Special discounts are available for two or more family members attending the camps.

In addition to instruction, the cost for both of the camps will include an official camp t-shirt, camp basketball, official camp photo, awards, camp insurance, certificates for each camp participant and entertainment.

All camp activities will take place in SPC's Texan Dome and will include individual and team instruction, scrimmage games, special drills, individual contests and recreational activities.

For more information or to acquire a basketball camp registration form and brochure, contact the SPC athletic department at (806)894-9411, ext. 221

TONETTE STUDENTS WIN RIBBONS

Twelve fourth grade students attended the 1st Annual Tonette Solo and Ensemble Contest at Loop High School. Eleven of the students received Division I (Superior) Ribbons and 1 student received a Division II (Excellent) ribbon.

Following is a list of the students who performed 2 solo's each:

- Chrissy Armstrong
- John Brummett
- Tammy Cooley
- Johnnie Granados
- Rendee Herring
- Thad Isaacs
- Amanda Lance
- James Nance
- Clint O'Brien
- Shalina Reyes
- Preston Sharp
- Porfirio Vargas

Fourth Grade Tonette Players: Back row (L to R) MANDY LANCE, CHRISSY ARMSTRONG, TAMMY COOLEY, JOHN BRUMMETT, JAMES NANCE AND PRESTON SHARP. Botton row (L to R) RENDEE HERRING, JOHNNIE GRANADOS, SHALINA REYES, PORFIRO VARGAS AND CLINT O'BRIEN.

*Fix dripping faucets: they can waste 25-30 gallons a day.

*Use an automatic dishwasher, which requires about 10 gallons of water to wash a full load of dishes. Washing the

dishes by hand with the water running may consume 30 gallons.

*Wash a car with premeasured cleaner in containers, then rinse carefully. Don't let the hose run constantly -- this may

Going with the students were: Mrs. Pam Cooley, Mrs. Sallie Wilson and Mr. John Harris.

SPECIAL SCHOOL BOARD MEETING
May 7, 1990 - 7:00 p.m.

The Board of Trustees of the Borden County Independent School District met in special session on May 7, 1990 at 7:00 p.m. in the Board Room of the Borden County Schools in Gail, Texas. The meeting was called for the purpose of canvassing the election returns.

Minutes:

Minutes of the April 16, 1990 meeting were read. A motion was made by Joel Dennis and seconded by Kenny Hensley to approve the minutes. Motion carried unanimously.

Canvass School Trustee Election

The Board of Trustees canvassed the election returns of the May 5 Trustee Election as follows:

	Jon Monger	Jack McPhaul	Randy Adcock
Absentee	27	27	26
Box 2A	10	11	12
Box 4A	8	8	9
Box 3A	5	5	5
Box 1	16	18	17
Box 4B	4	4	4
Box 3B	11	11	11
Box 2B	1	1	1
Total	82	85	85

A motion was made by Scott Clayton and seconded by Joel Dennis to accept the count as presented and declare Jack McPhaul and Jon Monger duly elected to regular 3-year terms and Randy Adcock duly elected to the 1-year unexpired term left vacant by Bill Phinizy. Motion carried unanimously.

Oath of Office

Superintendent McLeroy administered the first part of the oath of office which disavows bribery in order to be elected. The oath was given to Jack McPhaul, Jon Monger, and Randy Adcock. The second part of the oath of office will be administered on May 21, at the regular board meeting. A motion was made by Kenny Hensley and seconded by Scott Clayton to adjourn. Motion carried unanimously.

ANNUAL SALES

ANNUALS FOR THE 1990 - 1991

SCHOOL YEAR

WILL BE ON SALE IN THE OFFICE OF

THE SUPERINTENDENT

MAY 7 - 18, 1990

**PRE-SCHOOL
DAY**

Pre-Kindergarten day will be Friday, May 11. All pre-school children who will be five years of age on or before September 1, 1990, are invited to attend school on this date. The kindergarten class will be the hosts. Meals will be provided by the school. Please contact the bus driver in your area if you would like for your child to ride the bus or the parent may bring the child to school. If your child rides the bus, please send a note with the name of the child and parents, address, and phone number. This is very important in order to contact you if necessary, and to send you beginning school information later in the summer.

Registration cards will be provided for each child. If you bring your child you may wish to bring immunization records and birth certificate. If the parent elects not to visit the school on this date, please return the registration card, birth certificate and immunization records when your child reports to school in September.

GRADUATES OF CAKE DECORATING CLASS

L-R Front: JACKIE HARRIS, SYLVIA RIOS, JOAN GRAY and DEBRA POLLARD. Back: BARABRA YORK, LISA LUDECKE and COOKIE DYESS. (Staff Photo)

Joan Gray, Homemaking teacher at Borden County School, along with Debra Pollard, CEA-HE Borden County, organized a class in cake decorating with Debbie Brummett of the Vealmoor community, as the instructor.

Nine women attended four classes held in the Possee Building. They learned the basics of icing a cake as a foundation for the decoration. Then Debbie told them to let their imagination fly with the decorating.

DEBBIE BRUMMETT

They also learned there is more to a decorated cake than meets the eye.

She showed them how to make roses on a gum-dropped nail and other tricks using different metal tips placed on a bag filled with brightly colored frosting.

Clowns in purple and yellow costumes, strawberries, dinosaurs, roses of all colors and a flower basket

were only some of the fancy cake decorations that were done.

At the end of the last session, they discovered they had surpassed their own expectations.

Texas A&M researcher says depression is less likely in college women

COLLEGE STATION — Women attending college are less vulnerable to depression than women of the same age not pursuing a degree although it's not clear why, notes a Texas A&M University psychologist who researches the components of depression.

"A survey of literature on the subject shows that college women are not typical of most women when it comes to vulnerability to depression," says Dr. William Rholes.

Women generally tend to be more "state-oriented" — more analytical and reflective — in their depression, he says. Such tendencies can lead to a vicious cycle of more depression for such state-oriented individuals as opposed to action-oriented persons who are less reflective and more oriented toward goals, plans and actions, he explained.

Depression does not occur in just one form, he says, and is measured by its persistence, recurrence and severity.

Rholes also has found those people with a strong support system from family and friends can handle more stresses and can prevent depression.

"Everyone goes through times of unhappiness and stress — it's all part of normal life," Rholes said. "But when the symptoms don't go away and they are too severe for the circumstances, you're not dealing with the normal blues."

Vincent Baptist Church

PLANS REVIVAL

PRESS RELEASE... PRESS RELEASE... PRESS RELEASE...

Vincent Baptist Church will hold revival services May 7th. thru 11th. at 7:00 PM nightly. Evangelist for the revival will be Terry Fox, Pastor of Gardendale Baptist Church of Corpus Christi, Texas. Rev. Fox is well known within the Southern Baptist Convention as a very gifted evangelist. He has served as pastor of Hillcrest Baptist Church, Big Spring, Texas as well as several pastorates in Arkansas.

James Kinman, a deacon at Hillcrest Baptist Church, Big Spring will be the Music Evangelist. Mr. Kinman is currently a member of the Singing Men of West Texas, and has been active in the music ministry for a number of years serving churches in the Big Spring Baptist Association.

Special emphasis nights will be observed each night of the revival. These special emphasis include **SUNDAY SCHOOL NIGHT** (Monday), **CHILDREN'S NIGHT** with Hot-Dog Supper for children 1st thru 5th. grades at 5:30 PM (Tuesday), **FAMILY NIGHT** (Wednesday), **MYSTERY NIGHT** with some very special mystery guests (Thursday) a fellowship follows, and **YOUTH NIGHT** with Pizza Supper for youths 6th thru 12th grades at 5:30 PM.

For more information call Bro. Bob Bradberry at 965-3341.

Thank You

CRASH DIETS CAUSE WEIGHT GAIN

An initial weight loss of five to ten pounds on a crash diet can turn into a weight gain because of the crash diet's ability to slow down the body's metabolism.

Metabolism is the process whereby calories are used and replaced in the body. The basal metabolic rate (BMR) is the rate at which calories are burned while the body is at rest. The BMR, which operates around the clock, is the base number of calories needed to keep the body functioning.

When calories are dramatically lowered, such as on a crash diet, the body defends itself from starving by slowing down its metabolism. The body then burns calories at a slower rate. The result is that weight loss becomes more difficult.

For example, consider a man who has a BMR of 2,200 calories a day and goes on a 900-calorie diet. His body is shocked, so it lowers the metabolic rate to conserve energy. As a result,

the man feels tired and sluggish during the early days on the diet. After he loses 15 pounds, he returns to his normal diet.

However, his metabolic rate remains low. His normal eating now results in more calories than the body does not need. These calories then are turned into fat, and the man can easily gain back the weight he lost—plus more.

Permanent weight loss involves a slow, steady process. To lose one pound of body fat, you need to lower your energy level by 3,500 calories. In other words, you need to have 3,500 fewer calories coming in than being expended.

To lose a pound a week, a 500-calorie adjustment must be made to the daily diet. This adjustment can be made in a two-step process.

Exercise also is important because it increases the metabolic rate, builds lean muscle tissue and consumes fat as fuel.

By making some adjustments, 52 pounds can be permanently lost in one year.

SPC OFFERS SUMMER CLASSES

LEVELLAND--South Plains College will offer a series of full-time and part-time classes this summer for persons interested in college-level training in automotive and diesel service technology.

Registration for the 12-week summer course is May 21 on SPC's

Levelland campus. Classes begin that day and will meet from 7:30 a.m.-4 p.m., Monday through Friday. The courses end August 10.

According to Mike Caroland, program coordinator, the summer classes will enable a new student to get a head start on

their college program and allow current students to finish the program requirements quicker.

"Providing these full-time courses which will give a

Medical Advances Aid Women Facing the 'Change of Life'

For many women, entering menopause means a steady decline in the quality of day-to-day life. But studies have found that the changes associated with menopause can be controlled.

Physical changes at menopause include hot flashes, night sweats, changes in hair texture, and dry and sagging skin. Psychological changes may include depression, irritability, and a loss of sexual desire. The loss of the important female hormone, estrogen, that occurs with menopause can even cause silent changes, such as increased cholesterol and the long process of potentially crippling bone loss.

"Different types of tissue throughout a woman's body respond to estrogen," said Dan Kahn, MD, a family practitioner. "So when production of the hormone stops during menopause—the so-called 'change of life'—a multitude of symptoms may occur."

According to Patrick Hanford, DO, a family practitioner, signs such as brittle bones, "dowager's hump," hardening of the arteries, and shriveling skin were once thought to be "normal, albeit unpleasant, parts of the aging process for women."

But as noted by Somchai Chong, MD, a general practitioner, "Today we realize that many of these symptoms are related to estrogen deficiency, and thus they frequently respond to estrogen replacement."

"At least one of every 10 women," said Evelyn Smiley, MD, a general practitioner, "may be expected to develop serious complications directly related to estrogen deficiency if not treated in time." Almost 1,500 menopausal women live in the Dawson County area. "Today, estrogen replacement therapy may make it possible to maintain the quality of life for many women by controlling the symptoms and risks of menopause," she said.

Drs. Kahn, Hanford, Chong, and Smiley, of Dawson County, are among the 400 physicians in Illinois, Texas and Florida participating in a national program designed to increase women's awareness of menopause. Treatments are available that may enhance the quality of life for women entering the menopause. ♦

LET ME GET MY HAT

BY DENNIS POOLE

SPECULATIVE OSTRICH PRICES COMING DOWN

The price of ostrich chicks in Texas has dropped by a third since last summer and that means the high-flying speculation in ostriches is headed back to earth.

This purely speculative market seems to have peaked and is headed down. Breeders are selling to other speculators who want to get a taste of the ostrich business.

Meat, leather and feathers are marketable ostrich products, but it's speculation on ostrich breeding that has bid up the cost of the animals and raised the eyebrows of investors. Chicks eight to 10 weeks old are selling for \$1,500 to \$2,200, down by a third or more from a year ago.

Currently a proven breeding pair can be bought for \$25,000 to \$35,000, down from the reported \$50,000 to \$55,000 range of last year.

Ostriches are able to breed from age 2 or 3 until they are 30 to 40 years old, and an average female lays between 30 and 60 eggs a year. Considering the price of ostrich yearlings (\$8,000 to \$10,000 each), potential investors get dollar signs in their eyes when they work out the arithmetic that puts a ranch with a single pair of ostriches potentially grossing several hundred thousand dollars a year.

But it's not that simple. Those calculations assume that all the eggs will hatch and that buyers exist for all the ostriches raised.

People must realize that ostrich prices will continue to decline as more birds

become available. Ostriches are not for the average investor. It is important that one investigates very closely before investing.

Potential investors are encouraged to investigate thoroughly, by visiting ostrich ranches and attending seminars before taking the plunge.

Estimates indicate that there are 5,000 to 6,000 ostriches in the country with 75 percent of them in Texas and Oklahoma.

Eventually a small ostrich industry may develop, but the value of ostriches will be dictated by the value of products from the animals.

Current prices for ostriches in the United States are too high to stimulate the development of a slaughter market. Experts and breeders alike agree that a slaughter market, if it develops, is still a few years away.

The distinctive appearance of ostrich hide makes it a premium exotic leather for high fashion and Western wear markets. The leather is used in a variety of products, from boots and belts to briefcases and purses. It is a very tough high, yet it is also extremely flexible.

Full quill ostrich-boots currently sell for \$300 or more, and three pairs of boots can be made from one ostrich hide.

Right now American boot makers are begging for ostrich hides, and the breeders are confident this demand will continue. It is going to take a good marketing effort, but ostrich breeders hope American boot makers

will want to buy ostrich hides produced in the United States when that time comes.

A dressed 14-18 month old bird can yield 125 pounds of meat, mostly leg meat, and some say it tastes like veal.

Ostrich breeders can harvest feathers from their birds twice yearly. Each ostrich can annually yield 1 1/2 pounds of feathers, which can bring \$10 to \$125 a pound for a wide variety of uses ranging from fashion wear to feather dusters.

However, they are not that optimistic about future demand for ostrich products. Prices for leather and feathers, have not changed materially over the last three to four years. Wholesale prices for imported tanned, dyed quality hides are \$400-\$500 each. Feather markets appear to be very limited.

American breeders are also facing a lot of foreign competition from other nations. In most cases they probably can produce a much cheaper product.

RODEO WORKDAY PLANNED

COALITION GEARS UP FOR BUCKLE-UP WEEK!

As the summer vacation season approaches, Texas will join the rest of the nation in promoting Buckle Up America! Week May 21-28.

We've asked Gov. William P. Clements to proclaim "Buckle Up Texas! Week." The Texas Coalition for Safety Belts, its 52 member organizations, and safety advocates around the state will work together to increase buckle-up rates, recognize successful traffic safety programs, and promote the winning combination of belts and air bags.

The 70% Plus Honor Roll, sponsored by the National Highway Traffic Safety Administration, will be a key element in the Buckle Up America! celebration. Several Texas groups have already applied for honor roll membership; with luck, we'll announce our first honorees during Buckle Up Week! The honor roll is open to cities, companies, schools, and military bases showing belt use rates of 70% or higher. For more information contact Dyanne Cortez or Christy Arrington at coalition headquarters.

The 1990 Buckle Up America! Awards, sponsored by the American Coalition for Traffic Safety, will be another national event. This award program recognizes private citizens, public employees, civic groups, and agencies which have done more than their share to promote the use of occupant restraints. Four Texas

finalists are in the competition.

Passive restraints—either air bags or automatic safety belts—are now required in all new cars. The coalition staff will work with the Texas Automobile Dealers Association to educate the public about proper use of these new technologies.

Many people don't realize that an air bag is designed to work with a safety belt, rather than in place of one. Air bags deploy only in frontal crashes, and are only 20% to 40% effective alone. A lap-shoulder belt holds the occupant in place so that the air bag can give the best possible cushioning effect, and it works in non-frontal crashes, too.

Similarly, many of the new automatic safety belts have a manual lap belt which must be fastened for full protection. And some of the new safety restraints will not

secure a child seat properly unless the parent takes special steps.

Coalition member groups will work to promote these winning combinations to all Texans. We'll also stress proper placement of manual lap-shoulder belts and lap-only belts, which will be used in older cars for many years to come.

In addition to state and national coalition activities, many groups will be celebrating Buckle Up Week at the local level. We welcome your comments and questions, and hope you'll share your plans with us.

Poll Supports Workplace Rights

A recent survey by a Washington, D.C., polling firm, The Wirthlin Group, indicates non-smokers are supportive of certain smokers' rights.

The telephone survey of 500 Tennessee voters found that 69 percent of the respondents felt an employer has no right to ask a prospective employee if he or she smokes off the job, or to refuse to hire a smoker. And 71 percent agreed that an employer does not have the right to ask a job applicant to quit smoking.

According to an article in The Knoxville (Tennessee) Journal, Ron McMahan of McMahan Vaughan, a Knoxville public relations firm, said many of those polled were non-smokers who "don't think it's fair to restrict the legal freedoms of other people on that issue." McMahan Vaughan commissioned the study. ljl

student 12 semester hours upon completion lets him or her finish the program in about 18-months, rather than the traditional 24-months," said Caroland. "This lets the student get the training needed to begin a career and start to work sooner."

Caroland added that students may also enroll in half-time courses that allow them to attend classes either in the morning or in the afternoon. "This gives working

students a little more flexibility in scheduling a class and meeting work commitments," he said.

Through the program, South Plains College provides up-to-date training and instruction in automotive and diesel servicing. The program leads to a certificate of proficiency or an associate of applied science degree.

OLD TIRES BOUNCING BACK IN NEW ROADS

Imagine a wall, 25 feet tall, encircling the entire state. That's a big wall, even in Texas. But the 280 million tires that are discarded in the United States every year could build a wall that big.

Instead, engineers have found a better way to use some of the old tires piling up in landfills in every community in America. They're making asphalt-rubber, a paving material composed of asphalt cement and up to 25 percent crumb rubber, which is derived primarily from grinding up old tires.

Texas is a pioneer in the use of asphalt-rubber. Since 1983, more than 3.6 million tires have been put to work on Texas highways. In all, 85,000 tons of asphalt-rubber have been used on more than 3,700 lane miles, using 800 to 1,000 tires per mile, in 20 of the state's 24 highway districts. In February alone, construction contracts were awarded that will use more than half a million tires.

"Those who have tried this material have been encouraged by the results," said Bob Templeton, head of the highway department's Construction Division. "It seems to extend the life of the pavement."

Asphalt-rubber was developed in the early 1960s by Charles McDonald, a highway engineer from Arizona. He was searching for a flexible material to seal cracks in deteriorating roads. The

materials then used were too rigid. Under the weight of traffic, old cracks in the original surface "reflected" upward through the new surface. This reflective cracking demanded continuous attention.

Adding rubber to asphalt provided the elasticity, but the high cost of rubber made the material too expensive for widespread use. After trying various materials, McDonald came upon the idea of using old tires as a cheap source of rubber and began experiments with mixtures and application techniques.

McDonald's patented "band-aid" patches were placed in the Phoenix area to test their effectiveness in stopping cracks. The results were promising. The main problem encountered was application -- the material was too thick to be applied by conventional asphalt spreaders. The next decade was spent adapting equipment to allow the hand-applied "band-aids" to be stretched to the larger areas needed for highway construction.

In 1975, the Arizona Department of Transportation placed several test sections of asphalt-rubber. The successful experiments have resulted in the use of the material in at least 35 states, Canada, Europe, and Australia.

Texas began using asphalt-rubber in 1976. A survey by the Asphalt Rubber Producers Group (ARPG),

has found that the installation of an interlayer of asphalt-rubber between the old road surface and a seal coat of new asphalt pavement has eliminated reflective cracking on Interstate, primary, and secondary routes for the last 14 years.

The report concludes that "asphalt-rubber reduces maintenance costs by its resiliency, flexibility, and ability to seal a surface. It also resists oxidation age hardening that normally destroys a pavement without constant maintenance."

Asphalt-rubber serves as a moisture barrier, protecting the road base and surface from excess water. Because it is stickier -- more cohesive -- than conventional asphalt, mixtures can be formulated that allow for a more porous surface.

"The surface has little valleys that allow the moisture to trickle off to the side of the road rather than accumulating in puddles," Templeton said. This coarse mixture decreases glare during rain and allows tires to grip the surface better, thus reducing skidding and hydroplaning.

Another benefit determined by researchers in Belgium was a 50 percent reduction in noise after old pavement was covered with asphalt-rubber.

As a contractor who specializes in asphalt-rubber construction said, "Recycling is part of the appeal, but the end result is it gives you a better road."

Because of the cost of processing the tires, asphalt-rubber

costs about 40 percent more than conventional asphalt. But surfaces treated with asphalt-rubber last two to three times longer, according to ARPG estimates.

New state legislation requires contractors to purchase tires recycled in Texas if they are available and if the cost is not more than 15 percent higher than non-Texas sources. But no one in Texas currently grinds old tires.

Only six facilities exist nationwide. In 1989, they turned out 18 million pounds of crumb rubber from

about 1.8 million tires, a small percentage of the 280 million tires discarded annually.

"The legislation may create some impetus to develop this material in Texas," said Templeton. "Maybe when the inventors get hold of this they'll come up with a better way to produce the rubber crumbs."

Aging highways in need of repair and growing mountains of discarded tires are separate problems, but they can share a common road to a solution.

WATER WEEK

cont. from pg 2

consume 180 gallons or more.

°Wash a full load of clothes every time you use the washing machine. A partial load uses the same amount of water, about 60 gallons for washing and rinsing.

°Cut the water down when shaving; the tap running at full volume will use about 20 gallons.

°Use less water brushing your teeth. Brushing with the tap on may use 2 or more gallons of water.

°Use products longer and plan replacements carefully. For example not replacing the living room carpet for a year can save the 50,000 gallons required to make the new carpet.

By waiting a year to replace a washing

machine, a family could save about 4,500 gallons of water required to produce the steel for the washer.

°Using one tank less of gasoline per month can save 2,400 gallons of water per year. The car in your driveway has a water investment of about 100,000 gallons required in its manufacture.

°Lower the thermostat on an electric heating system from 70 to 68 degrees to save 900 gallons per kilowatt hour. Setting the thermostat higher for summer cooling also can save water.

Saving water in the home is easy; it's changing old habits that is hard. This is a major educational challenge of the 1990's

At Any Age, Keep the Quality in Your Life

For many women, entering menopause means a steady decline in the quality of their day to day life: hot flashes, night sweats, changes in hair texture, dry skin that has lost its firmness, loss of sexual desire, and the start of a long process of potentially crippling bone loss.

Today, the quality of life for many women may be maintained and the symptoms and risks of menopause controlled. Call your physician or call one of us. Get the facts about menopause and how you can help keep the quality of your life at its peak.
