Wolverine Booster Club Holds Regular Meeting Monday

The Springlake Wolverine Boosters Quarterback Club held their regular meeting Monday night with 31 present. This is the largest number to meet with the club thus far.

The menu consisted of broiled steak, creamed potatoes, green beans, jello fruit salad, toast and hot tea.

Another team of mothers will feed the boys Friday.

F. D. Clayton, president was in charge of the meeting. The trees on the west edge of the school grounds are already being moved in preparation for a practice field and play ground. The Quarterback Club is helping with this project. E. C. Hudson, who is a very faithful worker and member of the club states that they would like for more men who are interested in athletics to be present at the meetings which are held each Monday night at 8 p.m. in the school cafeteria.

Springlake Junior Hi, B-Team Score Wins

In the Springlake Junior High football game between Springlake and Otton last Thursday night Springlake was the winner with a score of 14-0.

Mitchell made the safety play and Jerry Don Sanders and Thomas Gregory made the touchdowns.

In the B team game played with Otton the scores were 36 to 28 in favor of Springlake.

The seventh and eighth grades, in Junior High School, will play Kress tonight (Thursday) at Kress.

The seventh grade game will begin at 5 p.m. with the eighth grade game immediately following.

Red Raiders

To Play T. C. U. Saturday Night

Lubbock—Texas Tech's third successive Southwest Conference game on the road sends the Red Raiders against defending champion Texas Christian at Fort Worth Saturday night.

TCU lost to Arkansas 7-0 last week, but the Horned Frogs bounced back from an early-season loss to the Razorbacks in 1959 to gain a share of the title. Therefore, Tech will be facing a team fighting to keep in the race for the championship.

Although never considered a threat for the title, the Raiders may keep alive a mathematical chance at first place by upsetting the Horned Frogs. Tech has a 7-3 tie with Texas A&M and a 27-0 loss to University of Texas marring its record, but with an eight-team race a poorer record could still win.

Texas Tech three times drove deep into Texas territory in Austin last week, but the Longhorns' forward will rise up each time. In fact the Texas units, especially in the first half, kept such pressure on the Raider passers that the Tech aerial game was under control most of the game. Texas utilized two quarterbacks, Mike Collier to Hank Collins and Mike Cooper, for 55 and 54

Wolverines Lose To Seagraves 52-8 In Tough Game

In the non-conference class A football game, played at Wolverine Stadium Friday night, Seagraves made seven touchdowns for a win over Springlake 52 to 8.

Seagraves' Don Maulkenberry captured the spotlight when he carried the ball eight times for 168 yards and 23 touchdowns. Maulkenberry, who played approximately 15 minutes of the game, scored on runs of 20, 11 and 77 yards.

Johnny Waller, Travis Wilcher, John Espinoza and James Petty added touchdowns for Seagraves.

With only seven minutes left in the game, Bill Shroy, Springlake's freshman quarterback, plunged across from the one yard line for the first and only Springlake score.

Shroy passed the ball to Ronnie Johnson who made the two extra points.

The Springlake reserves played almost six easy minutes in the game, as did the A string. The reserves played an outstanding game, however, most of the team was outwrestled and inexperienced in comparison to the Seagraves Squad.

Ronnie Dost, Jerry Hess, Bill Shroy and several other members on the reserves played a fabulous game against tremendous odds.

Friday night the Wolverines will go to Amherst.

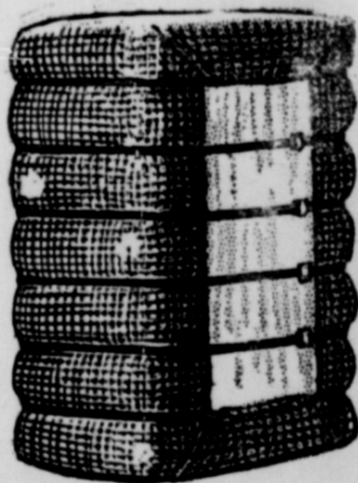

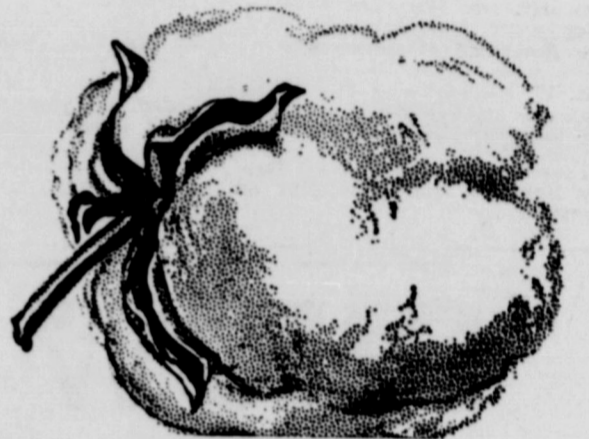

Mr. and Mrs. G. E. Thomason received medical certificates, in Lubbock, Tuesday.

yards, respectively, for first half touchdowns.

The crowd of 52,000—many of them from West Texas—was the largest ever to watch a Texas Tech football game.

After the TCU game the Raiders are at home to Baylor and SMU. Salinas team, but both reserved and general admission tickets are still on sale.

1961 Chevrolet On Display Here Friday - Saturday

Its here at last! The new 1961 Chevrolet will be on display Friday and Saturday at Thompson Chevrolet Company.

Bernie Sarradet, manager, invites the public to drop in and look over these New Chevrolet.

Top seller of 1960 automobiles, Chevrolet promises to solidify its position in 1961 by significantly broadening its range of passenger cars.

There are 20 freshly styled conventional models; nine Corvairs including new passenger and commercial models, and the spirited two-place Corvette.

Complete new body styling, which provides easier loading for both passengers and baggage and establishes new heights in motor-ing comfort and convenience, is featured in the regular line of passenger cars.

The entire body, from floor to roof and grille to rear bumper, is all new. Prime design emphasis has been placed on functionalism with thrift.

High on the list of advantages of the all-new body are:

1. Easier entrance to passenger compartments.
2. Large, more accessible luggage space, with the trunk loading level lowered as much as 10.5 inches.
3. Improved chair height and over-the-hood visibility which will

increase the ease of parking and add to driving safety.

4. Other safety items include improved brakes, overlap electric windshield wipers, and a new placement for the fuel tank which protects it from road hazards such as hard bumps and flying stones.

Although the conventional cars are shorter, narrower and slightly lower, the interior roominess remains about the same or better than comparable 1960 models. Riding comfort is improved.

From a styling standpoint, the new models feature gentle curves and smooth lines and a generally cleaner and airier appearance from all angles.

The Corvair models to be unveiled Friday also blossom out into a complete line of passenger and commercial vehicles. They include:

Passenger cars—Club coupes, four door sedans and a new Lakewood Station Wagon in the "500" and "700" series, plus the deluxe Monza Sport Coupe and the new Greenbrier Sports Wagon.

The spotlight in the Corvair field is expected to center importantly on the new Lakewood Station Wagon and the Greenbrier Sports Wagon.

Equipped with six doors and rated for a 1,600-pound payload, the brand new 95-inch wheelbase Greenbrier can readily be converted from a nine-passenger bus to a wide assortment of duties. It can carry six passengers and a 700-pound cargo or, with an optional third seat, nine passengers and 250 pounds of cargo.

The Lakewood Station Wagon is a four-door, conventional type six-passenger model. But, with the second seat folded down, it offers 68 cubic feet of cargo capacity. One exclusive feature is the 10-cubic feet of lockable storage space under the hood.

Newest and by far the best method of life saving—in case of drownings, heart attacks, shock or suffocation—is mouth to mouth resuscitation.

We've just seen a short film on the subject—which everyone in the state should view. It tells how, in a graphic way, to apply this greatly improved method of artificial respiration.

We can't explain it as clearly as the film portrays, but we'd like to relay this message to you until the times comes when you too can view the picture.

First step is to free the victim's mouth of any obstruction—food, if the victim is choking, water if drowning—then lay the person on his back, sit beside him, tilt the head far back, lift the chin high, grasp the nose to close it tightly, then take a deep breath (bring enough air into your own lungs to serve two persons), open the victim's mouth wide and force all the air you can from your lungs into his.

Then rest a second or two, take another deep breath, open the victim's mouth wide and again force all the air you can into his lungs.

Keep his nose closed all the time you are breathing into his lungs.

Repeat the resuscitation procedure until you see the first signs of life returning.

If air gets into the victim's stomach, press gently on his stomach to force the air out.

Here's hoping that this film will be shown before every sportsmen's organization in Texas, in the youth camps, before every civic group, women's club, the boy scouts, girl scouts, school groups everywhere, including of course the Red Cross, and the military.

Many a life, lost from drowning, suffocation and the like, could have been saved had knowledge of this revival process been widely known.

There is one important fact a-

bout this method of revival—the only equipment needed to do the job is always with you. It's you.

The film, entitled "That They May Live", is available for any and all gatherings free of charge, from the film library of the State Department of Health, 100 West 49th Street, Austin, Texas. The telephone number is GL 3-6631. If you want to make and LD call, ask for the division of health education.

Whether you're an outdoorsman, or an indoorsman for that matter, you need to learn this method — for your own good and your family's good, if for no other reason.

While deaths by accidents outdoors—on our lakes and streams and our hunting grounds — are many, fatal accidents in the home occur even more frequently. So, whoever you are, wherever you are, there is a good possibility that you or those dear to you may find this lifesaving method useful. We urge you to re-read, again and again, the simple procedure outlined above, learn the steps by heart so that you can perform them quickly. Then, if at all possible, see the film!

It was our good fortune to witness the showing at the recent Austin meeting of the Sportsmen's Clubs of Texas. It received a tremendous ovation. Everyone agreed that it should be circulated throughout the length and breadth of Texas.

Regardless of your station in

life, it is important that you have knowledge of the methods of performing artificial respiration. In fact, your own life may some day be in the hands of someone you taught how to do an efficient job

Sam Houston was converted and baptized in Rocky Creek in 1854, 18 years before they built the Old Baptist Church that now stands at Independence, in Central Texas.

A monument stone on the bell tower by the church reads, "She sleeps within its sound." Reference is to Mrs. Nancy Lea, mother of Houston's wife. She donated her silver service to be melted into the bell.

The tower was erected with stones from the ruins of the original Baylor building. Judge Baylor's hearthstone is said to be included in the tower.

We all knew Texas was big but we didn't know it was so old until the discovery of the Midland Skull in 1954.

Scientists estimated this human skull, found in a prehistoric water hole, to be over 12,000 years old. This may be the oldest skull ever discovered on earth. If so, it means that human beings lived in the Ice Age with the huge Mammoths.

Cotton Profits Upped With Fertilizer Use

College Station—Cotton farmers all over the state are looking for ways to make more profits from their crops. Dr. William F. Bennett, extension soil chemist, says fertilizer may be the answer. In every part of Texas, fertilizers are adding extra dollars to cotton income by increasing acre yields and lowering unit costs.

Perhaps you are already using fertilizer and it is not living up to expectations. In this case, you may be using the wrong kind of fertilizer, or you may not be putting it where the crop can use it to the best advantage. Another common fault is simply not applying enough fertilizer.

There are several points to consider after you have decided to apply fertilizer. Dr. Bennett continues. Your soil may not need the same nutrients as your neighbor's. Different crop rotations, different locations and different compositions all affect the fertilizer needs of soil. Dr. Bennett says that soil testing is the best way to determine the needs of your soil—it is not the final answer, but it is valuable guide.

Most farmers know the three primary plant foods—nitrogen, phosphorus and potassium—but how many know what each of these does for his crop? Nitrogen gives plants a dark green color. It makes the crop grow off fast and it increases yield of lint and seed. Phosphorus, in addition to stimulating early root growth, stimulates blooming, aids in seed formation and hastens maturity. Potassium gives plants more vigor, aids in disease resistance and stiffens the stalks.

All of this talk about cotton fertilization may seem strange to you at this time of the year. Fall has come to mean fertilizing time to an increasing number of growers on loam, clay loam and clay soil explains Dr. Bennett. When the fertilizer is put out early it doesn't

It's the Law in TEXAS

The Supreme Court of the United States sits at the pinnacle of the Nation's court system. It's justices, as they are properly called, have the final say as to questions concerning rights arising under the U. S. Constitution and as to matters over which the federal courts are given jurisdiction.

The Court sits at Washington, D. C. in a magnificent building located near the Capitol. At present the Chief Justice is Earl Warren while the eight Associate Justices are, in order of their service on the court: Hugo L. Black, Felix Frankfurter, William O. Douglas, Tom C. Clark, John M. Harlan, William J. Brennan, Jr., Charles Evans Whittaker and Potter Stewart.

The Court holds one regular term each year commencing on the first Monday in October. The term usually continues until sometime in June. During its course the Court will hear oral arguments on well over a hundred cases and will dispose of many hundreds more without hearing argument.

Certain cases may be appealed automatically. But in most cases it is discretionary as to whether the Court will grant reviews. The seriousness of the legal question, conflicts of interpretation among the lower courts and on some occasions erroneous results will motivate the acceptance of a case for full hearing and argument.

U. S. Air Force Announces Prior Service Program

Attention all former servicemen, according to TSgt Glen Ryan, your local Air Force Recruiter, the United States Air Force has now in effect a far sweeping Prior Service Program. This new concept applies to many former servicemen regardless of prior branch of service.

In frequent cases a prior serviceman can enter the Air Force in the same grade as separated and choose his base of assignment.

black-robed Judges step forth from openings in the velvet drapes behind the judicial bench to assume their duties.

In the usual case each side is given one hour to present its argument. The presentation is frequently interrupted by sharp questions from the bench and the lawyer with a weak point often finds himself seriously embarrassed by cutting remarks from some impatient justice.

Argument continues until 2:00 p. m., when the Chief Justice announces a recess for a half-hour lunch period. Then at 2:30 court resumes and is finally adjourned at 4:30 p.m. With arguments concluded the Court then takes the case under consideration, and prepares the decision and opinion of the Court.

For security, advancement, travel and an unlimited future, investigate this new program today.

If you are a prior serviceman between the ages of 17 and 46 and in good health be sure to contact Sgt Ryan for full information. Write Box 601, Clovis, N. M., or contact him at the Littlefield Chamber of Commerce office on Wednesday between the hours of 10 a.m. and 3 p.m.

VOTE FOR TEXAS

RICHARD M. NIXON, candidate for President, is a Californian, but he thinks the Texas way. Richard Nixon stands for:

- A strong national economy and defense so that America will not have to apologize to Khrushchev for anything;
- A sensible farm program that will attack and solve the present problems.
- Texas retaining its tidelands, and a tax policy favorable to Texas.
- Local control of our schools.

If you will read and compare Nixon's platform to that of his opponent, you will agree that a vote for Nixon is a vote for the best interests of Texas.

When we want to learn about agriculture, architecture or any other subject, we turn to someone with special knowledge in that field. How much more important is it, then, that we turn in prayer and study to the Creator to learn how to live in His universe.

Efficient farming methods are prerequisites to maximum profits, and failure to determine the soil's need for lime and fertilizer is not efficiency. Dr. W. F. Bennett, extension soil chemist, says that the best place to determine the amount of lime or fertilizer a pasture or field needs is in the laboratory.

Soil Test Is Best Investment Of Area Farmers

"A farmer or rancher gets more return on the money spent for testing and then applying recommended treatment to his soil than he does on any other money spent for crop production," Dr. Bennett points out.

Improper nutrient balance, coupled with a lack of weed, insect and disease control, greatly reduces the potential effectiveness of fertilizer. If the soil is high in acid or low in lime content, the phosphorus, potassium and some of the nitrogen is lost to growing plants.

Application of limestone produces such beneficial results as providing calcium for plant food and making phosphorus more available for plant use. Also, soil bacteria are stimulated, the soil is easier to work, forage plants are more nutritious for livestock and toxic materials in the soil are neutralized. Dr. Bennett continues.

All of the above benefits are made available to landowners whose soil is tested to determine what is needed. Soil samples are easy to collect, and any county agent can give you information on taking and mailing them, Dr. Bennett concludes.

Worms Woo the Bass

No angler likes to admit that he didn't catch fish on any of his hunting expeditions. In fact, the person likes to admit that he can't do anything he set out to do or that he should have done, that he even wanted to do.

Sorta reminds me of the minister who announced that his sermon for the morning would be about worms. He asked how many had read the 69th chapter of Matthew. A great number of hands went up.

"You're the ones I want to especially direct this sermon to," he said. "There is no 69th chapter of Matthew!"

Studies made by Heddon's research experts reveal that no angler likes to admit that he was skunked, blanked, or whitewashed. Yet it happens not once but often.

In fact, Heddon's surveys show that top-notch fishermen catch fish two-plus trips out of five. The other two-plus trips they get nothing but the enjoyment of being outdoors and "away from it all."

Of course, that's worthwhile in itself. But every fisherman goes fishing to catch fish. And to varying degrees he is disappointed when he catches none.

Actually the only man who never gets skunked is the one who never fishes. And if he does fish and says that he's never come home empty-handed, chances are he is one of those who swears he read the 69th chapter of Matthew.

Fortunately for mankind—a fellow remembers pleasures and successes more than he does unhappiness and defeat. Most every fisherman recalls the times when he makes the big catches and promptly forgets the trips when he draws the blanks.

Who was it who said—"Hope springs eternally . . . ?" Well, spring or fall, the fisherman's hopes never dim. He's a determined cuss. More power to him!

Talked to Bill Norton the other day and he was telling me that 90 per cent of the fish are caught by 10 per cent of the fishermen. Bill's one of those fishermen who ought to know, because he has fished for 40 years.

Besides that, he is manager of Sportman's Products, Inc., a Marion, Indiana, firm that makes plastic worms by the thousands.

Bill told me several interesting facts and I'd like to pass some of them on to you, to add to your own repertoire of tricks.

First, if you doubt the popularity of the plastic worm, just listen to this.

His first, so far this year, has sold almost five million. That's a lot of worms! In fact, Bill says it's a world record.

You and I know that fishermen don't buy lures, over and over again, unless they catch fish on them. So it's pretty evident from Bill's remarks that the artificial worm has turned out to be a mighty popular bait with the fishermen.

Hotter than hot is the way Bill describes them. And he sure has the figures to prove it.

Sportfan's Products makes the soft plastic "Catch-Em-Quick" lures. They are called bloodworms, gollywhompers, tadpoles, and what have you.

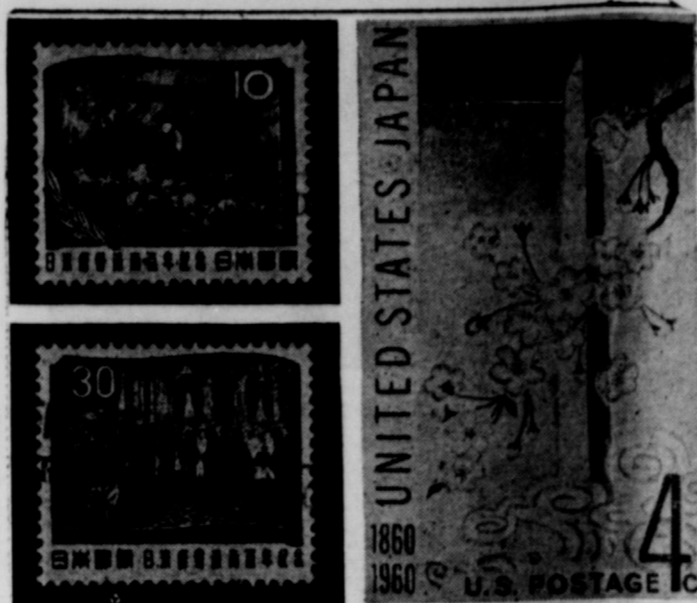

Latest product, however, is their blue, floating plastic worm. It doesn't have a hook in it. To use it, Bill suggests that you mount a 2-0 weedless hook in the head of the worm. Then add a no. 7 split shot about 24 inches up the line.

Fish up and down the slopes, deep cliffs, and both sides of points as well as the top of the ridge when you're fishing a point.

Now that he has told you where to do it—here's how to do it.

Drag the weight along the

New Commemorative Stamps

Celebrating the Centennial of the ratification of the first Treaty of Amity and Commerce between the United States and Japan, both countries have issued commemorative stamps for public sale. The 10-Yen Japanese stamp (upper left) depicts the "Kanrin Maru" which accompanied the U.S.S. "Powhatan" bearing the first Japanese diplomatic mission to the United States. The 30-Yen stamp (lower left) depicts the Embassy being greeted by President James Buchanan at the White House on May 17, 1860. The 4¢ U.S. stamp shows the famous Japanese cherry blossoms in Washington, D.C., with the Washington Monument in the background. It is engraved in pink and blue and was designed by Miss Gyo Fujikawa of New York, an American citizen of Japanese parentage.

bottom so that the floating worm is suspended a foot or two above the bottom. Fish is slow. As the weight bounces along the bottom, or along the rocks or other underwater objects, it disturbs the sand or silt, thus attracting the fish.

For best results reel in three or four times slowly, then twist or bounce the weight lightly, just enough to attract attention. Repeat that procedure until retrieved. Allow two and one half minutes to retrieve 60 feet. Then cast out again.

If you want to get some real action, Bill suggests that you tie a loose knot in the tail of the worm. Then cast it out and follow the procedure outlined above. As the lure is retrieved the knot gradually will untie itself. The water action will cause the worm to unkink. When it does, the worm will jump. This gives the worm added action.

Well, that's a trick we hadn't heard of. How about you?

Savings Bond Sales Increase in August

Savings Bond Sales in Texas increased 15 per cent in August over the same period of 1959. This report was made today by Mr. C. O. Stone, chairman of Lamb County Savings Bonds Committee.

"August Savings Bond Sales in our county were \$7,740. Sales for the first eight months amounted to \$196,959 which was 53.2 per cent of our county's 1960 goal," \$370,000 reported.

Texas Bond Sales for the first eight months of the year total \$195,607,518 which represents 63.8 per cent of the state goal.

"The Role of the Savings Bonds Program in light of world conditions cannot be overemphasized. Buying of Savings Bonds is a tangible way that each American can demonstrate his patriotic support of our great nation," Stone said in announcing the sales for his county.

dustrial and other off-farm employment.

Other eligibility requirements remain unchanged. Applicants must have sufficient farm experience to carry on sound farm operations, must need credit, and be unable to obtain financial assistance from other sources. As in the past, credit will be extended only to operators of farms that are family-type size or smaller. No loan will be made unless a plan for the coming year's farming operations shows that income from the farm and other sources will be large enough to enable the farm family to have a reasonable standard of living, pay debts, and have an adequate reserve for emergencies.

Loan funds may be used to pay farm operating costs, purchase equipment and livestock, pay farm development costs, and refinance certain debts. The interest rate is five percent. Repayment schedules depend upon the purpose from which funds are advanced and upon the estimated income from the farms. Usually, loans made for real estate purposes will be made from funds advanced by private lenders and insured by the agency.

Technical farm and money management assistance is supplied to each borrower to the extent necessary.

The Farmers Home Administration office serving Lamb County is located in the basement of the Post Office in Littlefield, Texas. The agency also supplies credit for farm housing and soil and water conservation.

Farmers Home Adm. Broadens Program

Farmers who have regular off-farm employment, if otherwise eligible, may obtain farm operating and development loans from the Farmers Home Administration, under the recently revised regulations of the agency.

Truman J. Jones, Farmers Home Administration county supervisor for Lamb County, said the new regulations will go into effect October 1. Previously, except in rural development counties, a farmer had to spend most of his time farming in order to qualify for a loan.

Experience gained in rural development counties has shown that many farmers who are regularly employed off the farm can profitably use the Farmers Home Administration's credit facilities to increase the farm portions of their total incomes.

The regulation, which has limited credit assistance to farmers who spend most of their time farming, prevented some from obtaining the maximum income from their farms and from taking advantage of opportunities for in-

Frank Wallace Named Plant Supervisor For This Area

General Telephone Company of the Southwest has announced the appointment of Frank W. Wallace as Plant Supervisor for the towns in the Littlefield area.

Wallace, formerly the Western Division Installation Coordinator, replaces R. P. Snider, who has transferred to San Angelo.

A graduate of Menard High School, Wallace also attended Texas Christian University for two years. He joined General Telephone in 1958 as an equipment installer's helper in Hobbs, New Mexico.

Aside from Littlefield itself, Wallace's area of responsibility includes Friona, Bovina, Muleshoe, Earth, Springlake, Sudan, Amherst, Witharral, Anton, Spade and Otton.

Wallace and his wife, the former Sue Wyman, have one son, Gregg, who is 3 years old.

Lamb County Soil Conservation News

Now is the time of year when landowners and operators in the Lamb County Soil Conservation District are getting into full swing with crop harvest and making plans for conservation work during the winter months.

Over 100 miles of terraces were constructed in the Lamb County Soil Conservation District during the past year and this year looks like an even bigger year with much interest being stimulated toward this valuable conservation practice with the high intensity rains during the month of July. Installing of conservation irrigation systems is also on the upswing with several landowners and operators going to sprinkler type irrigation systems on the steeper land and more coarse textured soils. This type of irrigation system is rapidly gaining in popularity with those who are interested in more uniform crops, conserving valuable irrigation water and those who are interested in keeping their top soil in place and not let it end up

down in the bottom of their lakes. Funds are available at this time and applications being taken for assistance under the Great Plains Conservation Program. The Great Plains Conservation Program provides federal cost share assistance for carrying out needed conservation practices on farms and ranches where land owners and operators desire to carry out a complete conservation plan. An individual can draw up to \$2500. cost share assistance for irrigation practices based on 50 percent of the average cost. Total contract limitations are \$25,000 for a ten year contract. If you have a conservation problem and desire to work out a complete conservation plan on your farm or ranch, you are urged to contact the local soil conservation service assisting the Lamb County Soil Conservation district, offices in the Court House, Littlefield, Texas, and make application for assistance under this program, and discuss with technicians your conservation needs and problems and start conservation plan on your place.

Mr. and Mrs. J. P. Flake, Plainview, visited Friday in the A. C. Barton home.

For depths up to 800 feet

Berkeley SUBMERSIBLE

- The answer to your water supply problem
- Economy of Operation: Greater capacity and pressure with minimum power consumption.
- Lower Initial Cost: Because of high efficiency you can buy a lower horsepower pump to meet your capacity and pressure requirements.
- Smaller Well Diameter: You can make a substantial savings on a new well because a Berkeley Submersible can be installed in wells as small as 4" diameter.
- Protection from Freezing: All operating parts—pump and motor—are set deep in your well, completely safeguarded against extreme cold.
- Berkeley Submersibles will pump efficiently from depths to 800 ft. Capacities range as high as 30 G.P.M.

ON-THE-FARM GRAIN STORAGE

Come in... Find Out How This

Behlen Curvet

PAYS FOR ITSELF

will show you exactly how you can have this all-purpose farm building completely paid for in only 28 months.

Here are the Facts About the Behlen Curvet

The Frameless All-Steel Curvet is the ideal building for any size grain farmer... because both grain and machinery can be stored under one roof (separated by a partition bulkhead). The Curvet costs approximately 30% less than most straight wall steel buildings. It is so rugged you can safely store grain 12' high against the sidewalls. This building (which is 40' wide) may be built in any length. It may be easily expanded at any time.

You may also equip your Curvet with the most advanced driving floor system yet developed. Ask us!

Dear Mr. Middleton:

Thanks for your gift of the sign for Field Day. They had a lot to do with our having the largest crowd ever with around 2,500 in attendance. We fed 1,925 at the barbecue. Many farmers came for the early tours and left before the evening program.

Do you think many editors could attend if we held this program on Thursday? Would you like to have the names of those attending from Earth and vicinity for the next issue of your paper?

Thanks again for your contribution of signs. They attracted attention throughout the area.

Sincerely yours,

Dear Sir:

Congratulations on winning the fourth place award in general excellence at the 30th annual West Texas Press Convention held in Pecos last August.

I appreciate so very much the newspaper press. I realize the press is of great value in the preservation of freedom. Jefferson said, "When the press is free and every man is able to read, all is safe." I know that you will put forth every effort possible to maintain this freedom.

If I can be of service to you in any way, please contact me.

Respectfully yours,
