Art Courses Increases At LCC

Art has a growing future at Lubbock Christian College with the advent of new courses in the fall semester that will allow elementary and secondary education majors to choose art as their teaching field.

Education majors are encouraged to take advantage of summer school at LCC to gain hours in required courses and take Art 332, "Art Education for Elementary Teachers."

Sometimes in the near future, LCC plans to offer art majors in commercial art and studio art.

Anyone interested in taking art the second semester of summer school (July 8 to August 13) or in the fall, contact J. Lee Roberts, acting Chairman of the Lubbock Christian College Art Department.

A broken or weakened step could result in a bad fall. Be sure to check the front and rear steps and landings as part of your Spring fix-up campaign.

THRIPS
Thrips migrate to cotton from many other host plants. Their injury to young cotton causes malformation of leaves and shedding of small squares. This results in delayed growth and loss of fruit. Thrips damage usually occurs early in the season, but may continue in some areas.

ACTUAL LENGTH: 1/15"

WHAT TO LOOK FOR Walk diagonally across fields from two different directions, and inspect plants. Thrips damage is light if the newest unfolding leaves show only a slight brownish tinge along the edges, with no silvering of these or older leaves, and only an occasional thrips is seen. Damage is medium if the newest leaves show considerable, brownish along the edges and some silvering on the underside of most leaves, and thrips are found readily. Damage is heavy if silvering of leaves is readily noticeable, terminal buds show injury, plant is ragged and deformed, and thrips are numerous.
